

The WINTER Season is upon us.....

During the winter months remember to:

- **Insulate pipes and faucets in unheated areas.**
- **Heat all rooms in your home that have plumbing fixtures.**
- **Drain and disconnect outdoor hoses.**
- **Adjust your sprinkler timer to reduce the amount of time and days you water.**
- **Protect your outdoor water meter box. Your water meter needs to be covered to protect it from freezing. Contact the District if your meter box cover is damaged or missing.**
- **The District's crews are very busy when the area has freezing weather conditions. Knowing where your house shut-off valve is located can save time and prevent damage from flooding.**
- **If a water pipe breaks, contact the District immediately to have someone turn off your main shut-off valve.**
- **Never use an open flame or electrical device to thaw frozen pipes.**
